

Customers to visit Case IH combine technology source

Case IH Axial-Flow[®] combine harvesters epitomise the machinery company's commitment to power and innovation, and Case IH is offering growers the opportunity to see this industry-leading technology at the source.

Following from last year's successful USA Case IH Tour of Duty for Steiger[®] tractor buyers, growers again have an opportunity to visit Case IH manufacturing facilities in the States. This tour will include a visit to the Grand Island, Nebraska factory – home of the Axial-Flow.

Geoff Rendell, Case IH Product Manager – Hay and Harvest, said the trip is available to customers who order a 2014 model Axial-Flow combine harvester before 30th April this year, but they must select the tour option when they place their order, and the limited places are available on a first come, first served basis.

“Case IH Axial-Flow combines set the industry benchmark for operator comfort, uptime, grain quality and grain savings, regardless of crop or paddock size,” said Geoff.

“The tour will show customers first-hand the cutting edge research at Case IH facilities that leads to such innovations.”

According to Geoff, the tour is just one advantage of ordering your combine prior to 30th April.

“Forward orders allow you to get a machine built to your unique specifications, and take advantage of early order discounts.

“2014 Axial-Flow combines also now come with a two year/2000 hour RedCover Plus Protection Plan, for even greater peace of mind.”

First time flagship Axial-Flow owners will also have the opportunity to attend the Combine Operator School later this year.

Axial-Flow combines are synonymous with simplicity and reliability, thanks to the fewest drive components of any combine on the market.

Carefully matched systems ensure productivity, while the cab sets industry standards in convenience, comfort and operator ergonomics.

PRESS RELEASE

The Axial-Flow also boasts:

- **AFS Pro 700** display in all models for yield monitoring and machine and guidance control in the cab
- **Multifunction Propulsion Handle**, placing controls within fingers' reach
- **In-cab control** of grain tank extensions and inclined delivery auger as standard across all models
- **Folding unload auger** with a reach of 10.4m from the centre line of the combine and in-cab pivoting unloading auger spout, making on-the-go unloading move convenient on all 7230, 8230 and 9230 models
- **Reduced compaction** with a large tread footprint and a choice of two track widths on the 7230, 8230 and 9230 combines

Customers can qualify for the 2014 expenses-paid tour, and take advantage of a list of special offers, if they order their Axial-Flow combine before 30th April this year, subject to terms and conditions. Places on the tour are strictly limited, so customers are advised to place their orders early to avoid disappointment.
